

Montgomery County Precinct 4
Culvert Setting Program

In an attempt to insure proper drainage is maintained, Montgomery County Precinct 4 Commissioners office has implemented a culvert installation program that has resulted in a very economical way to get a quality installation of a culvert. The property owner only ends up paying for the culvert and the crushed concrete necessary to cover the culvert. The county installs the culvert for free as a service to property owners in Montgomery County.

Culvert Setting Request Steps:

The property owner marks the location where the culvert is desired and marks the desired width (20min -40ft Max). 30ft has proved to be the most versatile for access but many people have installed either 20ft or 40ft culverts also.

After marking the location, call the county at (936) 521-8919). A supervisor will come out to inspect the location and determine the diameter of culvert required and the number of loads of stabilized fill material (generally crushed concrete) required to cover the pipe in the ditch only. Additional quantities of stabilized fill cannot be purchased through their office.

Property owner will be contacted with culvert size and material loads info.

Property owner pays county for stabilized fill (crushed concrete) and sets up install date. Payment for stabilized fill should be hand delivered by cash - exact change only, check or money order (no credit cards accepted at this time.) Stabilized fill - \$300 a load as of Nov 2015.

Property owner purchases the culvert (corrugated plastic or concrete) at location of their choice and makes sure it is onsite by the agreed upon install date.

County comes out for no additional charge and installs the culvert. In order to coordinate the marking of utilities and maintenance crew schedule, plan on a minimum of 4 days between the time of payment and culvert install.
